WHY FAREED ?

- **Problem:** Redundant project titles in trending fields cause approval delays and wasted effort.
- **Cause:** Lack of an automated system to check project uniqueness.
- **Solution:** An AI-based system for early similarity detection to ensure originality.

OBJECTIVE

Make the project selection process easier for student, supervisors, and .

METHODOLOGY

RESULTS

- **Semantic Analysis:** Used TF-IDF and Cosine Similarity to detect underlying meaning, not just exact words.
- **Automated Decision:** Applied a strict 25% threshold to instantly classify proposals as "Unique" ($< 25\%$) or "Duplicate" ($\geq 25\%$).
- **Authentic Dataset:** Validated against a real-world corpus manually collected from multiple university archives.
- **Process Efficiency:** Eliminated manual review delays by providing real-time, automated verification for committees.

CONCLUSION

- **Proven Automation:** Proves AI can effectively replace manual title verification.
- **Process Optimization:** Shows strong potential to save time for supervisors and committees.
- **Ready for Adoption:** Offers a validated tool to ensure originality in future projects.
